

SAND PRIMER

Plaster adhesion primer

Applications

Sand primer is an adhesion primer consisting of synthetic resins and quartz sand. It is used on smooth or non absorbent surfaces to improve the adhesion of the subsequent plaster. It is suitable for indoor and outdoor use. After the application, it offers a coarse surface with high resistance to alkaline environment. Ideal for gypsum plasters.

Technical Data

Density:	1,48 kg/lit
pH:	7-9
Drying time:	1-2 h

How to use - Consumption

SAND PRIMER is ready to use water based primer. The surface to be primed must be dry and free of grease and loose particles. Before application the content of the can should be stirred well, using a low revolution mixer, until a uniform mixture is formed. The material is applied by brush or roller in one layer. The ideal dosage is 300-350 gr/m², depending on the layer's thickness.

Storage

Self-life in unopened containers is at least 12 months in areas protected from frost.
